# ABOUT High Secure System

Over the last decade, High secure system has done over 1000 projects and gained the trust of 400 organizations all done by expert engineers specializing in electromechanical and consultancy. Serving the needs of different clients and projects with the required combination of engineering and practical experience in the field of Mechanical, electrical, and plumbing services & contracting.

Some of our products are certified by :

## Our Mission

To make the security of clients our highest priority, by providing the most secure & reliable solutions, by using the most efficient systems, in a SMART & professional way, to ensure a secure, safe & sustainable work environment.

## Our Vision

To be the organization's first choice when it comes to the Sustainability of their buildings in the MENA region.

# Our Values

## Work **SMART**

Work to be Specific,  
Measurable, applicable,  
resources based on time.

## The client **is always right**

There is always a middle ground  
to establish a fruitful conversation  
and win-win situation.

## We Are **Pioneers**

We always search for the latest  
solutions to develop what we offer.

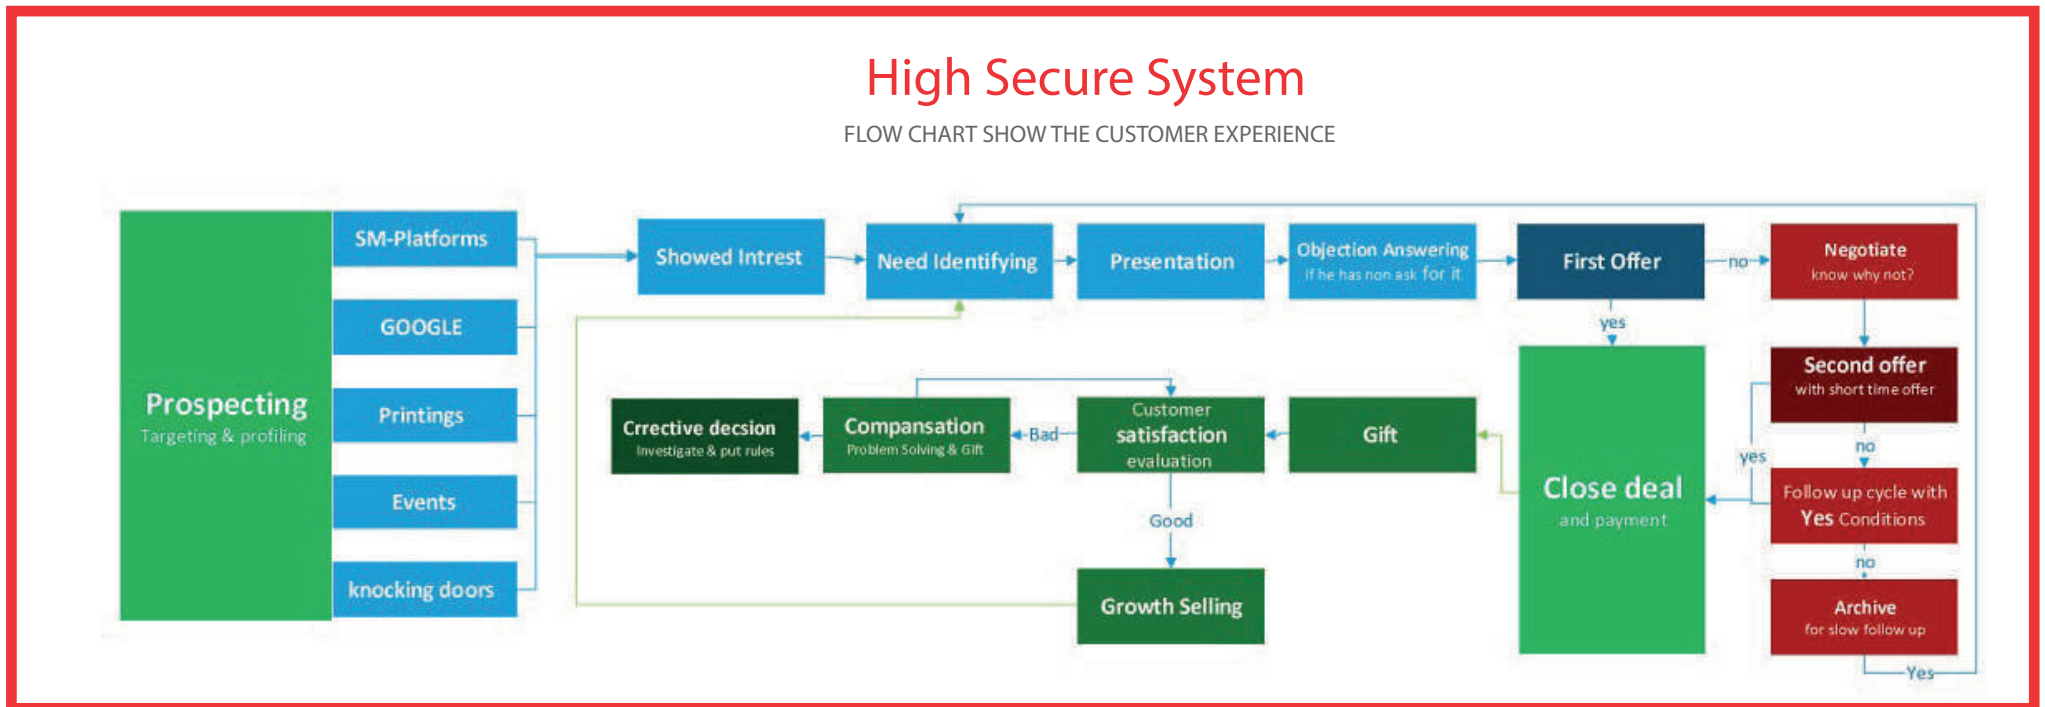

## Safety **is the priority**

Our safety and the safety of clients  
and organizations is our priority.

# Our Process

High Secure System is committed to providing the best quality of service and to ensure that, we have to plan, execute and always develop a clear & SMART process to make sure that our clients get the highest level of satisfaction all over their experience while working with us.

That's why we are able to share with you what is going to happen between us, as we believe that we are working in long-term partnerships and it's your right as a partner to know.

# Our Services

We offer a full range of solutions through our distinguished services in the field of firefighting, fire alarms, HVAC systems, maintenance, facilities management, light currents, general supplies and everything that organizations need for a healthy and Safe work environment.

Fire Alarm System

We provide our clients with several systems designed specifically to put out fires in the facility by automatic methods. Fire alarm systems help in trying to control the early stages of the fire, These systems are divided into:

- Conventional Fire Alarm systems
- Addressable Fire Alarm Systems

Intelligent analog-address fire alarm systems, which are often used in large and medium-sized projects and intelligent buildings, can indicate in detail where the fire occurred. Smoke detectors, Smoke linear detectors, Heat detectors, and multi-sensor detectors allow the user to quickly and efficiently detect the fire. Addressable gas detectors can detect gas leaks and prevent potential hazards. In addition, residents can manually activate the fire alarm system with manual detectors. So we always make sure to use high-quality products such as velocity, Mavili, Watson system.

# Fire Fighting

# +404

## Fire Fighting System

We design and implement firefighting systems using Pumps according to NFPA 20, Pumps Rooms According to NFPA 22, Standpipe systems according to NFPA 14, Sprinkler systems According to NFPA 13, Dry powder system according to NFPA 10, FM200 systems, Co2 Systems for chemical and Kitchen systems, and Fire suppression systems.

Firefighting products have a major role in saving institutions and people when any fire occurs, so we use and supply the best products from sprinklers and fire extinguishers

- **Sprinklers:** A fire sprinkler system is an active fire protection method, consisting of a water supply system, providing adequate pressure and flowrate to a water distribution piping system, onto which fire sprinklers are connected.

- **Aerosol Fire :** This is a completely new type of fire extinguisher that is perfectly suited to the harsh marine environment.

- **A fire extinguisher:** is an active fire protection device used to extinguish or control small fires, often in emergencies.

## HVAC System

We supply, maintain, and support all HVAC systems such as Chillers systems, DX systems, VRF systems, VRV systems, DX systems, Air Ducts, Black steel Ducts, and Ventilation systems.

ALPLATABA

HVAC improves air quality in the building, helping make it appropriate for human breathing and comfort. It reduces humidity so users can enjoy a better atmosphere. This is most especially useful in buildings or underground spaces where ventilation is limited.

- **Chiller system:** a device that controls the temperature by circulating a liquid such as water or heat medium as a cooling liquid whose temperature was adjusted by the refrigerant cycle.

- **VRV:** Variable refrigerant flow, also known as variable refrigerant volume, is an HVAC technology invented by Daikin Industries, Ltd. in 1982. Like ductless mini splits, VRFs use a refrigerant as the cooling and heating medium.

- **DX systems:** DX stands for direct expansion cooling. In DX cooling equipment, a refrigerant coil is placed directly in the supply air stream. As the refrigerant evaporates and expands, it removes energy, lowering the temperature of the supply air stream

## Construction Service

Structural work is the basis of any institution and we guarantee you in High Secure System that you will receive outstanding service through a group of expert engineers in this field, which is evident through our previous work with many clients.

ALPLATABA

We offer our clients a variety of construction services based on their requirements and needs such as excavation services, concrete pouring, and all services related to civil protection. By a team of specialists in this field with a great deal of efficiency and professionalism at work.

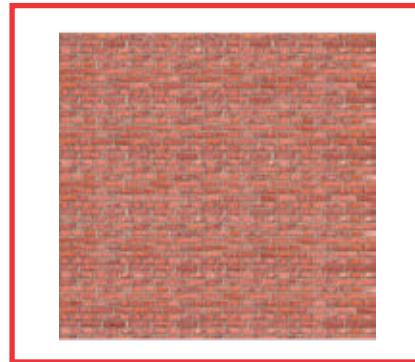

- **Digging and missions:** We plan, develop and cost drilling operations as well as review and manage contracts for drilling services and engineering designs and supervise on-site staff to monitor drilling procedures as well as enforce occupational health and safety rules and regulations and ensure environmental protection.

- **ready-made concrete:** We supply and pour ready-made concrete for various types of sites with professionalism and high quality.

- **Building:** We have the right tools and people to handle construction projects of different sizes, by first identifying requirements, then planning and implementing the project, and balancing the conflicting project constraints. These limitations include scope, quality, time, budget, resources, and risks
